

# BAR BUSTERS

## Single Operator Hydraulic

The bars spreader is designed to enable security or rescue forces to penetrate burning or protected dwelling through barred windows. The device spreads apart the bars, creating a space wide enough to allow people to climb through. Alternatively, it may be used for ripping the bars out of the wall. Both methods can be carried out quickly and easily. Although small, the device is very powerful and does not require an external power source. Designed to be carried on the shoulder, it is easily portable and easy to operate by a single person, noiselessly and with ease.

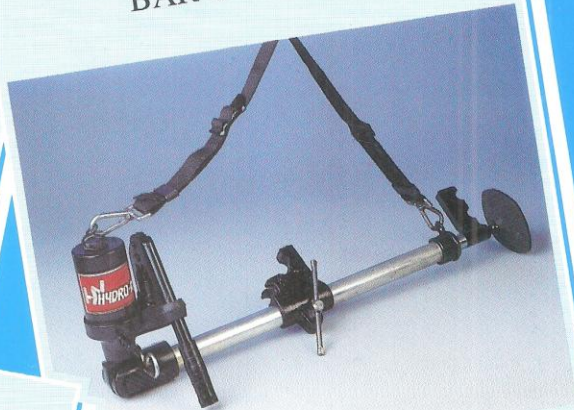

# Single Operator Hydraulic Bar Busters

BAR BUSTER HN -18

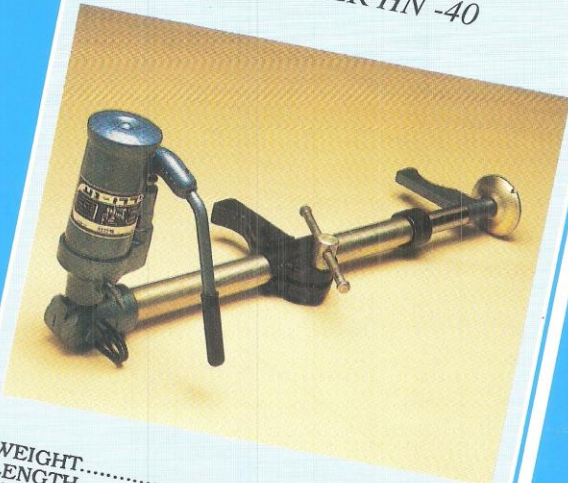

*WEIGHT.....	5.8 Kg
*LENGTH.....	500 mm
*WIDTH.....	130 mm
